

3.1 EXPONENTIAL FUNCTIONS

■ For a review of reflecting and shifting graphs, see Section 1.2.

EXAMPLE A Sketch the graph of the function $y = 3 - 2^x$ and determine its domain and range.

SOLUTION First we reflect the graph of $y = 2^x$ [shown in Figure 1(a)] about the x -axis to get the graph of $y = -2^x$ in Figure 1(b). Then we shift the graph of $y = -2^x$ upward 3 units to obtain the graph of $y = 3 - 2^x$ in Figure 1(c). The domain is \mathbb{R} and the range is $(-\infty, 3)$.

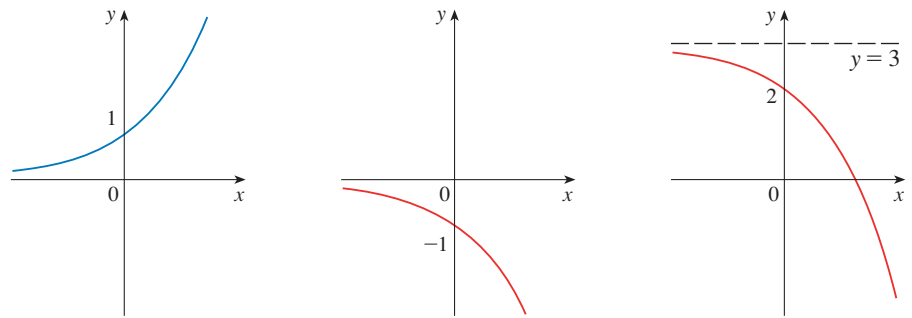

FIGURE 1

(a) $y = 2^x$

(b) $y = -2^x$

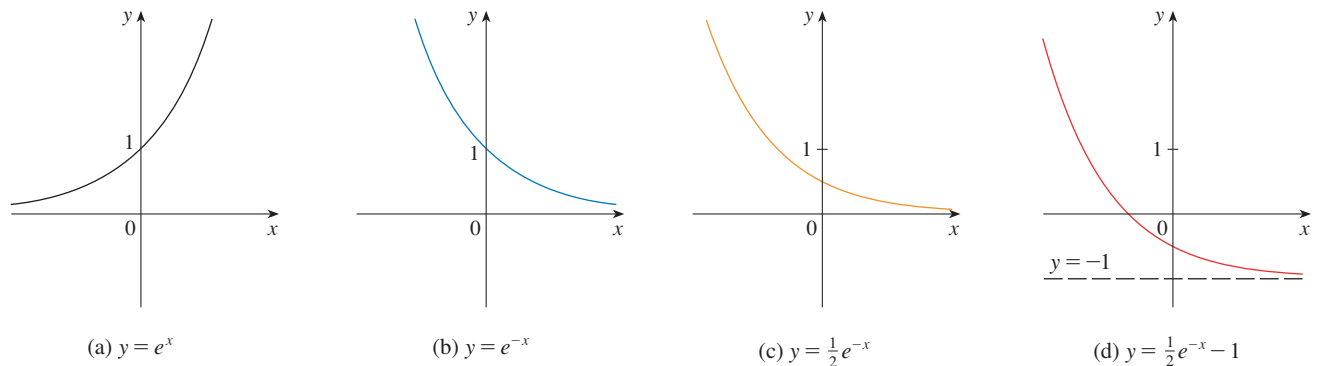

(c) $y = 3 - 2^x$ ■

▶ **EXAMPLE B** Graph the function $y = \frac{1}{2}e^{-x} - 1$ and state the domain and range.

SOLUTION We start with the graph of $y = e^x$ from Figure 2(a) and reflect about the y -axis to get the graph of $y = e^{-x}$ in Figure 2(b). (Notice that the graph crosses the y -axis with a slope of -1 .) Then we compress the graph vertically by a factor of 2 to obtain the graph of $y = \frac{1}{2}e^{-x}$ in Figure 2(c). Finally, we shift the graph downward one unit to get the desired graph in Figure 2(d). The domain is \mathbb{R} and the range is $(-1, \infty)$.

(a) $y = e^x$

(b) $y = e^{-x}$

(c) $y = \frac{1}{2}e^{-x}$

(d) $y = \frac{1}{2}e^{-x} - 1$ ■
